

# Meet compliance every time with AI-driven Identity Security

## How to simplify efforts, reduce costs, and demonstrate compliance with certainty

**Always be audit ready – even with ever-changing regulations. Here’s how.**

Legislative bodies across the globe are implementing rigorous regulatory measures to secure data, protect consumer privacy, and counteract persistent security threats. This is leading organizations spanning various sectors and regions to prioritize and establish effective and robust compliance protocols driven by business considerations and security imperatives.

Presently, the compliance procedures employed by many organizations lack automation, entailing repetitive manual tasks that consume valuable resources. However, to be successful, these processes must be more efficient, less costly, and immune to errors.

**The average multinational spends several million dollars a year on compliance.<sup>1</sup>**

**\$14.82M**

average cost of non-compliance<sup>2</sup>

**\$5.47M**

average cost of compliance<sup>2</sup>

<sup>1</sup>Harvard Business Review  
<sup>2</sup>Ponemon Compliance Report

Organizations need efficient pathways to sustain compliance—not only to streamline procedures but also to ensure successful outcomes and cost reduction.

**Organizations spend an average of 4,300 hours per year manually maintaining platform compliance.**

Drata's 2023 Compliance Trends Report

### **Enhance oversight and management of access risk exposure**

Organizations can significantly bolster their capacity to oversee and manage potential access risks with AI-driven identity security. With artificial intelligence and machine learning, organizations can easily scrutinize user behavior and access patterns, promptly detecting anomalies and unauthorized activities.

### **Simplify certification efforts and minimize errors**

Streamline operations by replacing manual processes with centralized policies and automated access certification, leading to significant time and cost savings. AI-driven recommendations expedite secure user access reviews, eliminating guesswork and rubber-stamping.

### **Accelerate proof-of-compliance through automated reporting**

By harnessing AI-driven identity security, organizations expedite the process of demonstrating compliance with automated reporting. Identity security assesses user activities and access patterns, automatically generating comprehensive reports that showcase adherence to regulatory standards.

### **Easily comply with global regulations**

Establish a “least privileged access model” that aligns with various regulatory frameworks and reinforces a Zero Trust identity security strategy. Enforcing least privilege limits access to job-specific requirements, which in turn helps to prevent data breaches and maintain compliance.

# Streamline compliance and retake control with SailPoint identity security

## Ensure audit readiness through intelligent automation

With SailPoint AI-driven Identity Security, organizations save time and resources by replacing paper-based, manual methods; centralizing policies; and automating access certification.

- Actionable insights accelerate secure user access reviews while maintaining a comprehensive audit trail of accounts, entitlements, policies, and actions.
- Oversee company-wide policy and privilege enforcement, reducing human error and ensuring audit readiness, elevating effectiveness, and minimizing the cost of continuous compliance.
- Bolster your identity security strategy with 360 degree visibility and access insights while seamlessly integrating SailPoint with existing systems for swift implementation.
- Low-risk user provisioning tasks are automated, strengthening control and confidence in ensuring the right users, have access to the right data, systems, and applications.
- Lighten the burden on IT teams and streamline processes with an integrated approach that aligns management, governance, and compliance within your organization's identity infrastructure.

**Identity solves key security compliance controls where a lack of compliance would otherwise cost 2.7 times more than compliance.**

## Certify, audit, and enforce regulatory compliance efforts

“SailPoint reduced provisioning and onboarding time from as much as six hours to less than 10 minutes. That was a huge enhancement for our team. We also replaced our system of running manual audit reports with the auto-generated audit and compensation control reports from SailPoint.

**Serdar Calin**

Access Governance and Identity Management Architect, Vodafone Turkey

“We understand that identity management means giving the right people the right access at the right time. For us to succeed, it is essential for our pivot to becoming a mobility company.

**Tomas Rollo**

Owner of Toyota Enterprise Architecture at Toyota Motors, Europe

#### About SailPoint

SailPoint is the leading provider of identity security for the modern enterprise. Enterprise security starts and ends with identities and their access, yet the ability to manage and secure identities today has moved well beyond human capacity. Using a foundation of artificial intelligence and machine learning, the SailPoint Identity Security Platform delivers the right level of access to the right identities and resources at the right time—matching the scale, velocity, and environmental needs of today's cloud-oriented enterprise. Our intelligent, autonomous, and integrated solutions put identity security at the core of digital business operations, enabling even the most complex organizations across the globe to build a security foundation capable of defending against today's most pressing threats.
